

Screen Personas

Featuring the user friendly SAP GUI

Solution features:

Creates user-friendly interfaces for standard SAP transactions.

Main benefits:

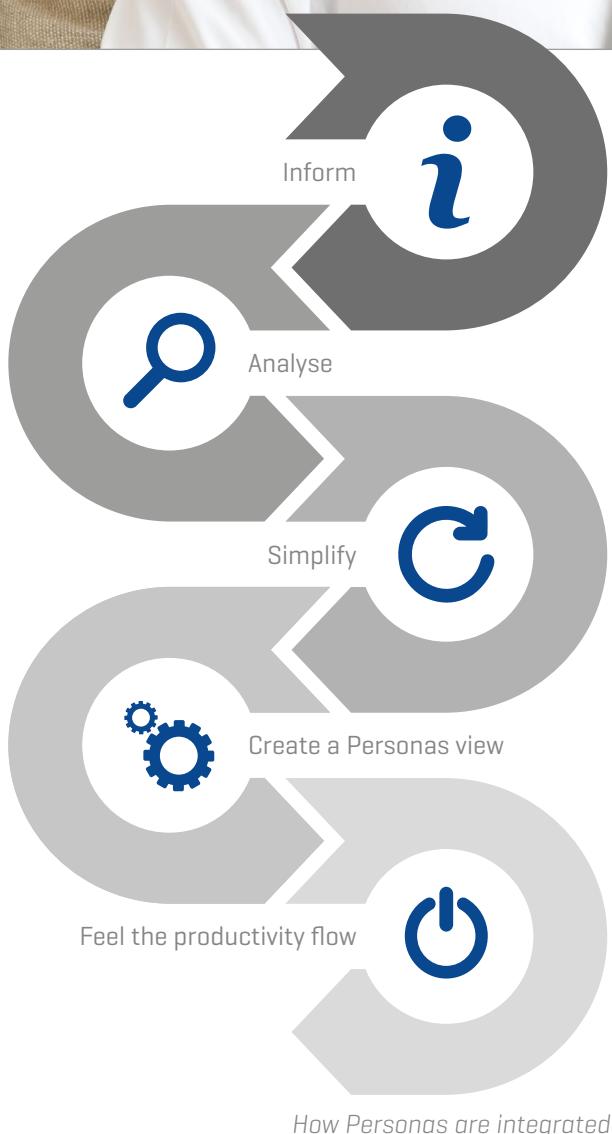

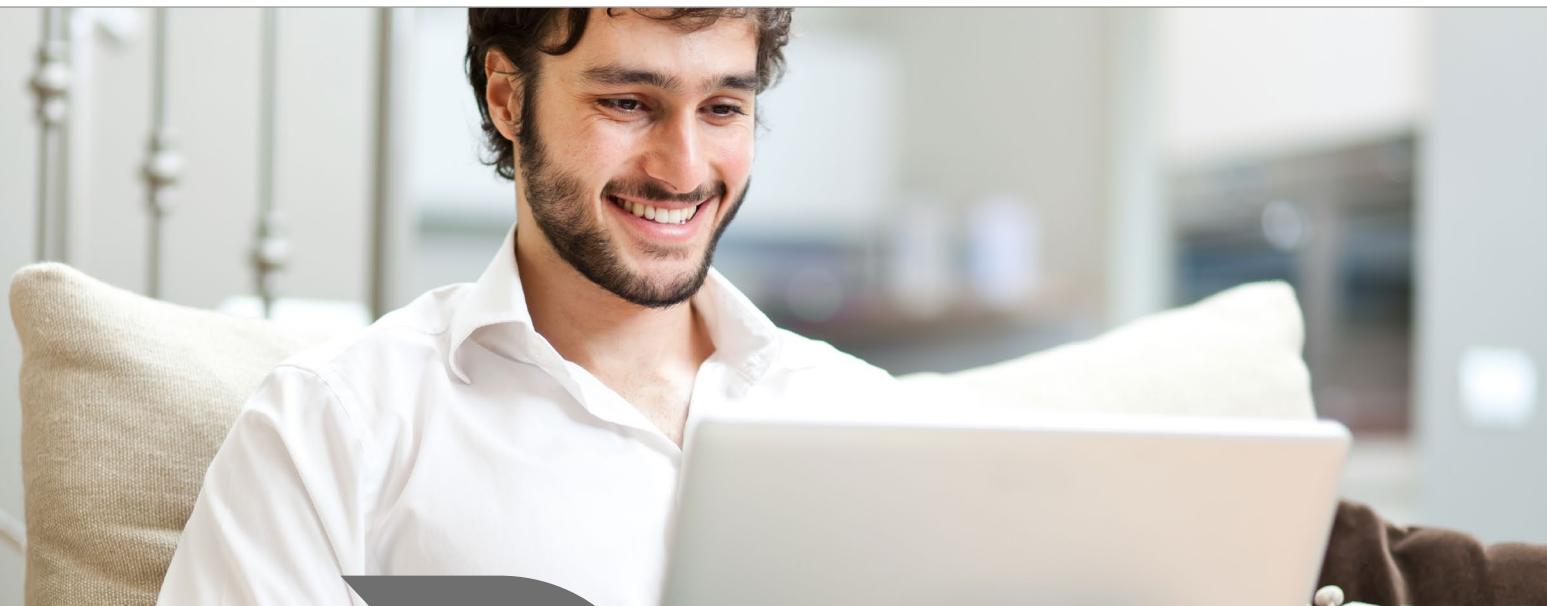

- Tailored user experiences increase efficiency and productivity
- Ease of use boosts user acceptance and satisfaction
- Promotes faster adaptation of transactions

Usage:

SAP Screen Personas offers customers the flexibility to redesign company-specific SAP dynpros in line with their own business requirements. This software gives business and IT users the option to modify dynpros in short order, promoting usability and greater efficiency at work.

Generally speaking, a given employee only requires a few of all the transactions available. This means the typical working environment is considerably more extensive than it needs to be. Enter SAP Screen Personas, which makes it possible to create intuitive UIs that offer only the relevant functions without significant programming effort. As a result, users need much less time to carry out their tasks. Screen Personas also meets the increasing standards of design and usability expected by today's employees.

For users themselves, this translates into simplified interfaces that consolidate related work steps, which in turn improves process security.

Functional scope of SAP Screen Personas:

- SAP Screen Personas is a tool for creating personalised user interfaces for SAP transactions by means of drag-and-drop.
 - Display/hide fields at the click of a mouse
 - Consolidate multiple steps [scripts]
 - Visualise and personalise attractive SAP GUI dynpros for web browsers
 - Tailor user interfaces to the requirements of business users and specific working methods
- SAP Screen Personas offers business users greater clarity in working with SAP dynpros by limiting their access to the data they need for their work.
- Labels, quick info elements and sticky notes make it possible to add further information to dynpros, as well.

Integration:

SAP Screen Personas is an add-on that leverages standard functions for system landscape maintenance, flavour management, UI editing, theming and object transport. It can be installed on SAP NetWeaver basis systems. The functions provided by SAP Screen Personas are included in standard SAP licences.
